

BV solutions of rate independent differential inclusions

Vincenzo Recupero

Department of Mathematical Sciences, Politecnico of Torino, Italy

vincenzo.recupero@polito.it

We consider a class of rate independent differential inclusions with BV data and we study some continuity properties of their solution operators. This analysis leads us to a new notion of BV solution. We compare this notion with the classical one, and we provide a geometric characterization of the cases when these two kind of solutions coincide.
